Application

The M&C portable gas conditioning unit CSS-M is designed to carry out precise gas analyses at different locations. The version CSS-M/W is a completely pre-installed compact continuous gas conditioning system for wall-mounting.

Both gas conditioning units are housed in a compact and robust sheet steel housing, so that you can carry out or install your gas analyses quickly, with low maintenance and with maximum operating reliability.

The CSS-M gas conditioning unit is suitable for variable, discontinuous use as well as for continuous operation.

The components built into the CSS-M and CSS-M/W gas conditioning units can be used for standard applications.

Description

The CSS-M and CSS-M/W gas conditioning systems are equipped with a Peltier gas cooler of the ECP series with Jet-Stream heat exchanger, which cools the sample gas to constant +5 °C [41 °F] independent of the ambient temperature. As soon as the operating temperature of < +8 °C [46 °F] is reached after commissioning, the sample gas pump N3KPE is automatically switched on with the gas cooler status contact. The peristaltic pump SR 25.2 ensures continuous condensate drainage, making even long-term measurements possible without any problems. The corresponding particle filtration is carried out with the FPF-2-0.3GF ultra-fine filter, which also has an integrated liquid alarm sensor that switches off the sample gas pump in the event of an alarm. An FM40 flow meter is installed in the sample gas outlet. Flow monitoring is optionally available for the CSS-M/W version.

This means that the two gas conditioning units are complete conditioning systems for most gas analysis devices.
